Esercizio 1.   Let N be free union of two random graphs N_1 and N_2. That is, $N = N_1 \sqcup N_2$ and $r^N = r^{N_1} \sqcup r^{N_2}$, where by $\sqcup$ we denote the disjoint union.

1.   Prove that N is *not* a random graph.

2.   Assuming $|N_1| = |N_2| = \omega$ prove that N_1 is not definable without parameters.
     Hint: definable sets are fixed by automorphisms.

3.   Show that the assumption $|N_1| = |N_2| = \omega$ is unnecessary
     Hint: use downward Löwenheim-Skolem.

4.   Write a first order formula $\psi(x, y)$ true if x and y belong to the same connected component of N.

5.   Conclude that N_1 is definable (with parameters).

6.   Axiomatize (in words) the class of graphs that are free union of two random graphs.
